DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 18, 2009 has been entered.
2. Applicant's amendments and arguments to the Final Office Action of February 18, 2010 have been fully and carefully considered. The examiner acknowledges the changes made to the claims which use the terms "velocity" and "heat transfer coefficient". Applicant is thanked for making these changes. Applicant's arguments regarding Agarwal and Filippi et al., the discussion of the Dittus-Boelter and Sieder-Tate equations which are heat transfer equations applied in the heat transfer in tubes without phase change and the discussion of Agarwal and where phase change occurs and the Foster-Zuber correlation used in determining the heat transfer coefficient and the Chen correlation has been reviewed and applicant is thanked for detailed discussion and the differences described between the instant invention and that taught and described by Agarwal and Filippi et al. Applicant's arguments are persuasive and the application is in conditions for allowance.
3. The following is an examiner's statement of reasons for allowance: The prior art fails to teach and or suggest a method of controlling a catalytic bed reactor operating in pseudo-isothermal conditions by means of at least one heat exchanger crossed by a

respective operating fluid immersed in the catalytic bed wherein the velocity of the exchange fluid inside the respective heat exchange is set so that the heat transfer coefficient inside the heat exchange is less than the heat transfer coefficient in the catalytic bed. By setting the velocity of the heat exchange fluid as claimed surprisingly and advantageously improves the homogeneity of the temperature within the catalyst bed which would not be readily, (if at all) expected by the ordinary artisan and therefore the invention as claimed has not been taught either singularly or in combination by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Arencibia, Jr. teach a reaction vessel which includes internally placed temperature controlling mixing baffles in which liquid is held resulting in an isothermal heat sink. Applicant's method of setting the velocity of the exchange fluid inside the respective heat exchange is set so that the heat transfer coefficient inside the heat exchange is less than the heat transfer coefficient in the catalytic bed has not been taught or described.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
